

Pre-Submission (Q-Sub) Request

Grounded in: Connected CGM (Dexcom-class iCGM)

Basis: FDA Q-Submission program.

Device	Connected CGM (modeled on a Dexcom-class iCGM)
Type	Pre-Submission (Q-Sub)
Note	Illustrative — frames the questions an excellent Pre-Sub asks for a connected mobile SaMD.

1. Questions for FDA

- Is the cybersecurity test scope (SAST/DAST/SCA, BLE fuzzing, mobile MASVS, pen test) adequate for a connected CGM + mobile app?
- Are the proposed security architecture views sufficient given the cloud + follower-share ecosystem?
- Is OWASP MASVS-based evidence acceptable to support the mobile controls?

2. Device & context

Integrated CGM (iCGM) with BLE to iOS/Android apps and cloud; interoperable with automated insulin delivery systems.

3. Proposed strategy

- SW96 security risk management; CycloneDX SBOM; published CVD policy.
- Independent penetration test by an accredited lab before submission.

Sources (public)

- FDA / Dexcom — Dexcom G7 510(k) clearance (Dec 2022); G6 first interoperable iCGM (2018, special controls).
- Public connectivity facts: Bluetooth Low Energy to the G7 app (iOS/Android) and Apple Watch; Dexcom Clarity cloud.
- FDA — Cybersecurity in Medical Devices premarket guidance (2025); OWASP MASVS for mobile.
