

GMLP Checklist (10 principles)

Grounded in: Viz.ai LVO (De Novo 2018) — computer-aided triage AI

Basis: FDA/MHRA/HC GMLP; device facts public.

Device	Viz.ai LVO (Viz.AI Contact) — computer-aided triage AI for stroke
Status	De Novo (2018) — first FDA-authorized computer-aided triage & notification software; analyzes CTA, alerts the stroke team
Basis	FDA/MHRA/Health Canada GMLP (10 principles). Illustrative evidence mapping.

GMLP principles — satisfied with evidence

#	GMLP principle	Evidence
1	Multidisciplinary expertise	Clinical neuro + ML + security across lifecycle
2	Good SW & security engineering	SDLC + threat model; HIPAA-compliant comms
3	Representative data	Multi-site CTA across scanners/demographics
4	Independent train/test	Frozen test set, no leakage
5	Reference standard	Neuroradiologist adjudication of LVO
6	Model tailored to use	LVO detection on CTA
7	Human-AI team	Notification augments the specialist read
8	Clinically relevant testing	Time-to-notification + detection performance
9	Clear user info	Intended use, performance, limitations
10	Deployed monitoring	Real-world performance + drift monitoring
